

Market

- Farmers, agricultural Research Centre, Govt, Training, Startups and Coop. protection agents

Audience

- Farmers and agriculture field Owners
- Agri-tech Companies and rural Cooperatives
- Government: agriculture departments

Solutions

- Rotating high different system powered by motor
- Sound & using blinking to scare birds
- ESP32 for the monitoring
- Remote android ios mobile app
- Wind powered energy generating for self sustainability

Over goals

- increasing crop loss from birds
- Remote, smart, sustainable agriculture
- provide app available link to small farmers

Trends

- Rising demands for Smart Agriculture and IoT based farm monitoring
- Government focus on Precision farming & non-harmful wildlife management
- Needs for Sustainable pest/bird control methods

Customer goals

- Protect crops from bird damage
- Reduce losses & Stress
- Avoid farming birds (Chaparral)
- Easy to monitor & control remotely

Values

- Safe and non-harmful bird deterrent
- Energy efficient & smart
- Reduce Manual work
- Continuous farm protection

Resources

- ESP32 Camera module, DC motor, wind generator, Sound Sensor, IoT platform
- mobile app for remote control

Competitors

- Ultrasonic bird repellent (China, Japan)
- Manual scarecrow and Sound based devices
- Limited use of AI/IOT enable different systems

Pain Points

- Manual bird scaring methods are ineffective
- Ultrasonic devices are costly or short-ranged
- No real time monitoring for Automation

Differentiation

- IoT, AI & IOT & renewable energy
- Combines different monitoring & automation
- Eco-friendly, low cost solution

Measuring success

- No reduction in crop damage
- Number of systems installed in farms
- Farmers satisfaction & positive feedback
- Increased yield & profit over a season
