

How do we need to involve?

- People are
- Farmers
- Local Communities
- Rural Innovation Partners

Challenges

What will we need to address?

- **Challenges**
- Water pricing economics
- Stake relation in agricultural
- Internal Connection

Storytelling

How will we communicate the essence of the project?

During the process, we visited a farm where a farmer was using various trials to test the truly planted seeds. He said he tried various seeds, some of which he kept for himself, but often found that the seeds stopped growing them.

"That's when we got the idea: what if we create a system that would make good seed from trial but also make automatically which is our project: FLENOVISION"

Problem: what will we need to solve?

Opportunity (potential)

Problem (verified)

What solution will we develop?

Solution

Solution (validated)

Vision

What dream vision look like?

- A Sustainable, Smart and different system using various
- Smart
- Visual motion to produce crops safely

What impact will we make?

Impact

- Eco-Friendly, non-toxic, and distance
- Reduce farmer confidence & yield
- Easy manual intervention and energy consumption
- Profitable via automated system

Impact

Discover

Define

Deliver

Management

How will we deliver the project and monitor progress?

- Prototype → Test → Field Deploy
- Monitor via mobile app (EFLV-Fit)
- Analyse and improve efficiency
